Subject: Copy of Access Agreement for the Falcon Superfund Site Ingleside, TX

Kwame

Attached for LTRI's review and signature is an access agreement that grants access to the Falcon Refinery Superfund Site to EPA and there designated contractor (EA Engineering Science) to collect environmental sample and install groundwater monitoring wells. EPA is tentatively planning on starting sampling on and offsite the week of July 14, 2013. We expect the sampling and installation of monitoring wells to only take three weeks. Please note that based on the results of the samples, EPA and EA may conduct additional sampling. EPA has requested the access agreement last 3 years or 6 months after completion of the RI/FS for the site. At this time EPA has not resolved the question concerning insurance coverage. EPA expects that this will be resolved shortly and would like to move forward the access agreement. Please call or email with any questions or concerns that you have.

Thanks

Brian W Mueller RPM
